Upper Hunter
Development Control Plan 2015

PART 10: NATURAL HAZARDS

(THIS PART IS AN EXTRACT OF THE
UPPER HUNTER DEVELOPMENT CONTROL
PLAN 2015, WHICH CONTAINS 13 PARTS)

Part 10 Natural hazards

Explanatory outline
Part 10 specifies outcomes, design guidelines and other requirements relating to the management of natural hazards. There are separate sections for each of the following matters:

10a Floodplain Management
10b Bushfire risk
10c Geotechnical hazard
Explanatory outline
Section 10a outlines assessment criteria relating to the management of development on flood prone land. The following matters are covered:

• compatibility of development with flood hazard
• general flood considerations, including flood proofing requirements
• safety considerations
• habitable (residential) buildings
• alterations and additions to habitable (residential) buildings
• non residential development
• rural development

10a Floodplain Management

10a.1 Introduction
The management of flood prone land is primarily the responsibility of councils by implementing the provisions in the NSW Government’s Flood Prone Land Policy and the associated NSW Floodplain Development Manual 2005. Accordingly, this DCP chapter has been prepared with regard to the above provisions.

10a.2 Application of this Part
This section applies to development described in Column 1 when carried out on land described in Column 2.

<table>

10a.3 Relevant planning instruments & legislation

The following environmental planning instruments or other legislation are relevant to development to which this section applies:

- Upper Hunter Local Environmental Plan 2013 (clause 6.2 Flood Planning)

Further planning instruments and legislation may also be relevant. In the event of any inconsistency, the above listed instruments will prevail over requirements or criteria contained in this section.

The NSW Government’s NSW Floodplain Development Manual 2005 is also applicable.

10a.4 Definitions

The terms that are used in this Section of the DCP are consistent with the NSW Government’s NSW Floodplain Development Manual 2005 and Upper Hunter Local Environmental Plan 2013. Relevant terms to this chapter in addition to those found in the UHLEP 2013 can be found in the Dictionary.

10a.5 Objectives

The objectives of this section are to:

- To minimise the risk to human life and damage to property by controlling development on flood prone land
- To apply a performance and merit based approach to all development decisions taking into account ecological, social, engineering safety and environmental considerations to ensure development is appropriate and sustainable
- To ensure that the development or use of floodplains waterways and riparian corridors does not adversely impact upon aesthetic, recreational and ecological values
- To ensure that all land uses and essential services are appropriately sited and designed in recognition of all potential floods
- To promote flood compatible building design that considers requirements for the development of flood prone land and does not adversely impact on adjoining properties
- To establish guidelines for the development of flood prone land that are consistent with the NSW Flood Policy and NSW Floodplain Development Manual (2005) and as updated by the associated Floodplain Risk Management Guides
10a.6 Using this Chapter

Determine your proposed land use as defined in *Upper Hunter Local Environmental Plan 2013*

Refer to the Section 149 Planning Certificate for the subject property to establish if the site is subject to flood related development controls.

1. Refer to Table 20 Land Use Categories to determine the land use category of the proposal
   2. Use the Maps in this DCP Chapter to determine the section(s) of the floodplain that the site is in (ie Flood Planning Level (FPL) to Probable Maximum Flood (PMF); High Hazard, Low Hazard or Other Flood Prone Land (Hazard not identified)).
   3. Contact Council to determine a flood planning level for the development site.

Is the development site located on land designated as FPL to PMF or Low Hazard on Council’s Floodplain Mapping?

If you are concerned that there may be flooding potential for the subject property or proposal that has not been addressed, contact Council.

Can the proposal be considered under the concessional development requirements listed under Sub-Section 10a.7(d) of this document?

Check if the proposal will satisfy the prescriptive criteria under Sub-Section 10a.7(a).

Determine whether the Performance based assessment referred to in Sub-Section 10a.7(b) of this document can be achieved.

Consider building design considerations of Sub-Section 10a.7(c) of this document and the Ancillary Development Requirements listed in Section 10a.8.

Consider all other relevant requirements prior to the lodgement of the appropriate application.
### 10a.6 Application Requirements

Development applications that are subject to this section should be supported by the following plans and documentation.

<table>
<thead>
<tr>
<th>Item</th>
<th>When required</th>
<th>Plans or information to be provided</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>A. General requirements</strong></td>
<td>All applications</td>
<td>Refer to section 2c Lodging a development application.</td>
</tr>
<tr>
<td><strong>B. Specific information requirements</strong></td>
<td>All applications</td>
<td>Development Applications for land subject to flood related development controls are to include the following information</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• A survey plan indicating:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>i  the position of the existing building/s or proposed building/s;</td>
</tr>
<tr>
<td></td>
<td></td>
<td>ii the existing ground levels and features to Australian Height Datum around the perimeter of the site and contours of the site; and</td>
</tr>
<tr>
<td></td>
<td></td>
<td>iii the existing or proposed floor levels to Australian Height Datum.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Applications for earthworks, filling of land, infrastructure and subdivision are to be accompanied by a survey plan (with a minimum contour interval of 0.25m) showing relative levels to Australian Height Datum.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• For large scale developments, or developments that in the opinion of Council are in critical situations, where an existing catchment based flood study is not available, a flood study prepared by a suitably qualified engineer using hydrologic and hydraulic dynamic one or two dimensional computer model may be required.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Any required information listed in Table 17 Prescriptive Criteria as applicable.</td>
</tr>
</tbody>
</table>
10a.7 Development Provisions

The development provisions are divided into prescriptive criteria and performance based assessment. Where the prescriptive controls cannot be met, an applicant can refer to the performance based assessment for flood related development controls on their site.

10a.7(a) Prescriptive Criteria

The Prescriptive Provisions shown within Error! Reference source not found. indicate where flood related development controls:

- can be met through the implementation of provisions as indicated (yellow and numbered);
- are not required (shown in green)
- in the view of Council, cannot be met through the use of reasonable development controls and will require further justification to be supported using the performance based assessment approach (shown in orange).

Flood related development controls do not apply

Flood related development controls apply (refer to numbered prescriptive criteria in Table 17 Prescriptive Criteria)

If the proposal is to be pursued further, a performance based assessment is to be provided demonstrating that the proposed development is compatible with the flooding characteristics of the site (refer to the section “Performance based assessment” and Table 19 Detailed Assessment Criteria).

| 2 | Joint report by a professional engineer who specialises in floodplain management and a professional engineer who specialises in civil engineering to certify that the development provides:  
  - Minimum Habitable Floor Levels = 1% AEP flood level plus 500mm freeboard (*Flood Planning Level*)  
  - Minimum Non-Habitable Floor Levels = 5% AEP flood level plus 500mm freeboard.  
  - Minimum level requirements for electrical fittings, internal sewer fixtures, and external overflow gully risers apply as per Building Code of Australia  
  - Minimum levels of open car parking spaces, carports and driveways = 5% AEP flood level  
  - Mine subsidence allowance to be added to levels (a), (b), (c) & (d) above, if applicable.  
  - Low flood hazard access and egress for pedestrians during a 1% AEP flood to an appropriate area of refuge located above the Flood Planning Level.  
  - Low flood hazard emergency vehicle road access (Ambulance, SES, RFS) during a 1% AEP flood event.  
  - All proposed structural components that can withstand the forces of floodwater including hydrostatic pressure, hydrodynamic pressure, impact of debris and buoyancy forces up to the flood planning level.  
  - Building materials and surface finishes at or below the flood planning level are all capable of withstanding prolonged immersion in water.  
  - Negligible flood affectation elsewhere in the floodplain for a full range of flood events up to the 1% AEP flood event, having regard to: a) loss of flood storage, b) changes in flood levels, flows and velocities upstream, downstream and adjacent to the site, c) cumulative impact of multiple development in the vicinity. |
| 3 | Joint report by a professional engineer who specialises in floodplain management and a professional engineer who specialises in civil engineering to certify that the development provides:  
  - Minimum floor levels = PMF level plus 500mm freeboard plus mine subsidence allowance, if applicable.  
  - Low flood hazard access and egress for pedestrians during a PMF flood to an appropriate area of refuge located above the PMF.  
  - Low flood hazard emergency vehicle road access (Ambulance, SES, RFS) during a PMF flood event. |
| 4 | Joint report by a professional engineer who specialises in floodplain management and a professional engineer who specialises in civil engineering to certify that the development provides:  
  - Minimum height of building footprints, open car parking areas, driveways and new public roads = 5% AEP flood level plus mine subsidence allowance, if applicable  
  - Low flood hazard access and egress for pedestrians during a 1% AEP flood to an appropriate area of refuge located above the Flood Planning Level.  
  - Low flood hazard emergency vehicle road access (Ambulance, SES, RFS) during a 1% AEP flood event.  
  - Risk assessment of flood hazard during a PMF flood event; including consideration of changes to flood behaviour, and location of floodways, to ensure that the consequences of the increased flood hazard are acceptable and manageable.  
  Negligible flood affectation elsewhere in the floodplain for a full range of flood events up to the PMF, having regard to:
Part 10 Natural hazards

10a Floodplain Management

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| a) loss of flood storage,  
b) changes in flood levels, flows and velocities upstream, downstream and adjacent to the site,  
c) cumulative impact of multiple development in the vicinity.  
| 5 | No filling allowable apart from area of building footprint, open car parking areas and driveway  
| 6 | Joint report by a professional engineer who specialises in floodplain management and a professional engineer who specialises in civil engineering to include an Evacuation Plan demonstrating that permanent, failsafe, and maintenance free measures are incorporated in to the development to ensure the timely and safe evacuation of people from the development in a 1% AEP Flood event, without significant cost or risk added to emergency services personnel. Signage of the plan must be prominently displayed around the development.  
| 7 | Report by a professional engineer who specialises in floodplain management to certify that the development provides: Negligible flood affectation elsewhere in the floodplain for a full range of flood events up to the 1% AEP flood event, having regard to:  
a) loss of flood storage,  
b) changes in flood levels, flows and velocities upstream, downstream and adjacent to the site,  
c) cumulative impact of multiple development in the vicinity.  

10a.7(b) Performance based assessment

Council will consider development proposals that do not meet the prescriptive requirements of this DCP Chapter only if a report prepared by a suitably qualified engineering professional accompanies the development application and addresses the following criteria. The information listed below can be used to justify minor variations to the prescriptive provisions. Table 19 Detailed Assessment Criteria provides further detail with regard to applying the Performance Criteria mentioned below and will need to be addressed in full for large scale proposals and/or significant variations.

- is compatible with the established flood hazard of the land. In areas where flood hazard has not been established through previous studies or reports, the flood hazard must be established in accordance with the Floodplain Development Manual.  
- will not significantly adversely affect flood behaviour resulting in detrimental increases in the potential flood affectation of other development or properties;  
- incorporates appropriate measures to manage risk to life and property from flood;  
- will not significantly adversely affect the environment or cause avoidable erosion, siltation, destruction of riparian vegetation or a reduction in the stability of river banks or watercourses;  
- is not likely to result in unsustainable social and economic costs to the community as a consequence of flooding.  
- is consistent with the principles of Ecologically Sustainable Development.  

Note: The prescriptive controls have been developed to ensure that proposals that meet the requirements of the relevant Prescriptive Control Schedule will meet the objectives of this Plan. A performance based assessment is likely to involve the submission of independent studies and reports. It is recommended that you should discuss the level of detail required and the likelihood of achieving a successful outcome using a performance based assessment with Council staff prior to making any decision to purchase and/or develop flood prone land.
10a.7(c) Building Design Considerations

Building design, whether relying on the Prescriptive Controls or Performance Criteria, should not result in significant impacts upon the amenity of an area by way of:

- overshadowing of adjoining properties that does not meet the requirements of the relevant development controls adopted by Council;
- privacy impacts (e.g. by unsympathetic house-raising);
- being incompatible with the streetscape or character of the locality. A request to raise the overall building height to beyond the prescribed building heights to achieve the appropriate minimum floor level will not be considered adequate. Building design is to be appropriate to the constraints of the site;
- filling of land to permit the construction of a building that has not been specifically designed in consideration with conditions that may be experienced on the floodplain. Slab on ground construction is generally not considered appropriate on a floodplain.

Figure 14 Floodplain development (where considered acceptable)
10a.7(d) Concessional Development – Minor Additions

In some instances, relatively minor building additions will have a minimal impact on the floodplain and will not present an unmanageable risk to life. Council will give consideration for the following forms of development on suitable sites:

- single dwelling house additions of up to 40m² of habitable floor area at or above the same level as the existing adjoining approved floor level for habitable floor area. The allowance for additions shall be made no more than once for any given development. Proposals for dwelling additions that exceed 40m² of habitable floor area are to refer to the provisions for single dwellings under Sub-Section 10a.6(a);

- additions to Commercial and Industrial Uses of up to an additional 100 m² or 20% (whichever the less) of the Gross Floor Area of the existing building at no less than the same level as the existing adjoining approved floor level. The allowance for additions shall be made no more than once for any given development. Proposals for additions that exceed 100 m² or 20% (whichever the less) of the Gross Floor Area are to refer to the provisions for commercial and industrial uses under Sub-Section 10a.6(a);

Any proposal to be considered as concessional development must:

- be supported with appropriate information at the development application stage that the proposed development can meet the requirements of the Building Code of Australia.

Note: The additional costs in achieving the requirements of the BCA for development below the flood planning level needs to be considered by the proponent prior to the submission of a Development Application.

- comply with the Building Design Considerations, Section 10a.7 – General Requirements, and any other relevant provisions of DCP 2015.

As part of any consent issued pursuant to this Section, Council may require:

- a restriction on use placed on the property title limiting the further development of the site;
10a.8 Ancillary Development Requirements

<table>
<thead>
<tr>
<th>Objectives</th>
<th>Requirements</th>
</tr>
</thead>
</table>
| **A. Fencing**                                                            | - To ensure that fencing does not result in any significant obstruction to the free flow of floodwaters.  
- To ensure that fencing will remain safe during floods and not become moving debris that potentially threatens the security of structures or the safety of people.  
- Fencing is to be constructed in such a manner that it will not modify the flow of floodwaters or cause damage to surrounding land.  
- Fencing construction is to withstand flood waters including debris loads. |
| **B. Car Parking**                                                        | - To minimise the damage to motor vehicles from flooding.  
- To ensure that motor vehicles do not become moving debris during floods, which threaten the integrity or blockage of structures or the safety of people, or damage other property.  
- To minimise risk to human life from the inundation of basement and other car park or driveway areas.  
- The proposed car park should not increase the risk of vehicle damage by flooding inundation. Any car park is to allow for a maximum of 300mm still water flood water depth unless otherwise provided through a flood study.  
- The proposed garage/car park should not increase the likelihood of flooding on other developments, properties or infrastructure.  
- Open car parking - The minimum surface level of open space car parking subject to inundation should be designed having regard to vehicle stability in terms of depths and velocity during inundation by flood waters. |
| **C. Requirements for Filling Flood Prone Land**                         | - To ensure that any filling of land that is permitted as part of a development consent does not have a negative impact on the floodplain.  
- Filling for any purpose (including the raising of a building platform in flood-prone areas) is not permitted in areas identified as High Hazard or Hazard Unknown in Table 16 , unless a Floodplain Risk Management Plan for the catchment has been adopted which allows filling to occur. In all other areas, filling will not be permitted unless a report from a suitably qualified engineer has been submitted and approved by Council that certifies that the development will not increase flood affectation elsewhere.  
- Filling of individual sites in isolation, without consideration of the cumulative effects is not permitted. Any proposal to fill a site must be accompanied by an analysis of the effect on flood levels of similar filling of developable sites in the area. This analysis would form part of a flood study prepared by a suitable qualified professional. |
| **D. On-Site Sewer Management**                                           | - To prevent the spread of pollution from on-site sewage management systems during periods of flood.  
- To assist in the ongoing operation of on-site sewage management systems during periods of flood.  
- The treatment tank/holding device and electrical components are to be located above the 1% AEP flood contour.  
- The land application area is to be above the 5% AEP flood contour.  
- Refer to Part 11g – On Site Waste Water Management in Non-Sewered areas for guidance with regard to this form of application. |
### Objectives

**E. Storage of Hazardous Substances**
- To prevent the potential spread of pollution from hazardous substances.

### Requirements

- The storage of products which, in the opinion of Council, may be hazardous or pollute floodwaters, must be placed at a minimum of 500 mm above the height of the 1% AEP flood or placed within an area protected by bunds or levees such that no flood waters can enter the bunded area if the flood level rose to a level of 500 mm above the height of the 1% AEP flood.

Galvanised or painted steel | Epoxy sealed timber water proof glues with stainless steel or brass fittings |
Table 19 Detailed Assessment Criteria – floodplain management

<table>
<thead>
<tr>
<th>Component</th>
<th>Assessment Criteria</th>
</tr>
</thead>
</table>
| Compatibility with established Flood Hazard / Flooding Impacts and Behaviour: | • impact of flooding and flood liability is to be managed ensuring the development does not divert floodwaters or interfere with flood storage or natural function of the waterway;  
  • flood behaviour (for example, flood depths reached, flood flow velocities, flood hazard, rate of rise of floodwater);  
  • duration of flooding for a full range of events;  
  • appropriate flood mitigation works;  
  • freeboard;  
  • Council’s duty of care – proposals to address and limit;  
  • depth and velocity of flood waters for relative flood event; |
| Impact on other land / Cumulative Effects of the Development:              | • development should not detrimentally increase the potential flood affectation on other development or properties or infrastructure, either individually or in combination with the cumulative impact of development that is likely to occur in the same floodplain;  
  • cumulative effects of the development and precedents created for further cumulative development. |
| Manage Risk to Life:                                                      | • the proposed development should not result in any increased risk to human life;  
  • controls for risk to life for floods up to the Flood Planning Level;  
  • controls for risk to life for floods greater than the Flood Planning Level;  
  • existing floor levels of development in relation to the Flood Planning Level and floods greater than the Flood Planning level;  
  • Council’s duty of care – Proposals to address and limit;  
  • what level of flooding should apply to the development e.g. 1 in 20 year, etc;  
  • effective flood access and evacuation issues;  
  • flood readiness – Methods to ensure relative flood information is available to current and future occupants and visitors;  
| Warning and Evacuation:                                                  | • available effective warning time and reliable access for the evacuation of an area potentially affected by floods;  
  • evacuation should be consistent with any relevant or flood |
evacuation strategy where in existence;
• depth and velocity of flood waters for relative flood event;
• Council's duty of care – proposals to address and limit;
• what level of flooding should apply to the development e.g. 1 in 20 year, etc;
• effective flood access and evacuation issues;
• flood readiness – methods to ensure relative flood information is available to current and future occupants and visitors.

Environmental Impacts:
• will not significantly adversely affect the environment or cause avoidable erosion, siltation, destruction of riparian vegetation or a reduction in the stability of river banks or watercourses.

The Cost:
• the additional economic and social costs that may arise from damage to property from flooding should not be greater than that which can reasonably be managed by the property owner and general community;
• land values and social equity – effect both negative and positive – e.g. development increasing land values, restrictions decreasing land values, etc;
• future development (specifically, the ability of the community and individuals to recover from flood events);
• economic factors both in regard to doing and not doing the development;
• social issues;
• servicing the development safely in flood e.g. potable water, sewer, etc.

Ecological Sustainable Development: Proposed development must be consistent with ESD principles including but not limited to:
• intergenerational equity – namely, that the present generation should ensure that the health, diversity and productivity of the environment are maintained or enhanced for the benefit of future generations;
• the precautionary approach - namely, that if there are threats of serious or irreversible environmental damage, lack of full scientific certainty should not be used as a reason for postponing measures to prevent environmental degradation;
• biodiversity conservation - namely, that conservation of biological diversity and ecological integrity should be a fundamental consideration;
• improved valuation, pricing and incentive mechanisms - namely, that environmental factors should be included in the valuation of assets and services.

Further information regarding ESD principles may be sourced from the Environmental Planning and Assessment Regulations 2000 Schedule 2 Part 6.

Emergency Services
• development will not unduly increase dependency on emergency services.

10.9 Supplementary guidance

The following documents or reference materials provide further advice or information that is relevant to this section.

- Aberdeen Flood Study 2013
- Scone Floodplain Management Study and Floodplain Management Plan 1999
- Draft Murrurundi Blandford Floodplain Management Study 1997
Part 10  Natural hazards

10b  Bushfire risk

Explanatory outline
Section 10b outlines assessment criteria relating to the management of bushfire risk. The following matters are covered:

- identification of bush fire prone land
- requirements and guidelines for development on bush fire prone land
- bush fire assessment report requirements

10b  Bushfire risk

10b.1  Application of this section
This section applies to development described in Column 1 when carried out on land described in Column 2.

<table>
<thead>
<tr>
<th>Column 1: Type of development</th>
<th>Column 2: Applicable land</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development comprising:</td>
<td>Land identified as bush fire prone land on the bush fire prone land map.</td>
</tr>
<tr>
<td>• subdivision of land for residential purposes</td>
<td></td>
</tr>
<tr>
<td>• residential accommodation</td>
<td></td>
</tr>
<tr>
<td>• residential outbuildings</td>
<td></td>
</tr>
<tr>
<td>• and other development that may be adversely affected by bush fire, such as commercial, industrial and tourist accommodation.</td>
<td></td>
</tr>
</tbody>
</table>

Note: To determine whether land is affected by this section, refer to the most recent Upper Hunter Shire Bush Fire Prone Land Map certified by the Commissioner of the NSW Rural Fire Service. This map is available for inspection at the office of the Council, and can be viewed on the Council’s web site.

10b.2  Relevant planning instruments & legislation
The following environmental planning instruments or other legislation are relevant to development to which this section applies:

- Upper Hunter Local Environmental Plan 2013
- Rural Fires Act 1997
- Upper Hunter Emergency Risk Management Plan – Natural Hazards

Further planning instruments and legislation may also be relevant. In the event of any inconsistency, the above listed instruments will prevail over requirements or criteria contained in this section.

10b.3  Definitions
The following terms defined in the Dictionary are relevant to this section:

- bush fire hazard reduction work
- bush fire prone land
- bush fire prone land map
- bush fire risk management plan
10b.4 Objectives
The objectives of this section are:
• to ensure development is designed, constructed and managed to minimise risks of bush fire
• to comply with the requirements of the Rural Fires Act 1997
• to apply the guidelines in current version of Planning for Bush Fire Protection.

10b.5 Supporting plans & documentation
Development applications that are subject to this section should be supported by the following plans and documentation.

<table>
<thead>
<tr>
<th>Item</th>
<th>When required</th>
<th>Plans or information to be provided</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. General requirements</td>
<td>All applications</td>
<td>Refer to section 2c Lodging a development application.</td>
</tr>
<tr>
<td>C. Flora &amp; fauna assessment report</td>
<td>Applications that involve clearing for bush fire protection that affects native vegetation</td>
<td>Include the matters required under section 11b Biodiversity conservation.</td>
</tr>
</tbody>
</table>

10b.6 Assessment criteria
A performance-based approach will be adopted in the assessment of development applications. Applications will be assessed according to the extent to which the outcomes specified in the left-hand column of the following table will be satisfied or achieved by the design, construction or operation of the proposal.

The design guidelines specified in the right-hand column indicate design and best practice solutions by which the required outcomes can be met. They do not preclude other solutions that may be suitable under particular local circumstances. All proposals will be considered on merit.

<table>
<thead>
<tr>
<th>Outcomes to be achieved</th>
<th>Design guidelines</th>
</tr>
</thead>
</table>
| A. Planning for bush fire protection | • Bush Fire Assessment Reports must identify bush fire risks, mitigating measures, and detail compliance with the current version of Planning for Bush Fire Protection.  
• Biodiversity and ecological values of the land should be identified and protected, as provided for in section 11b Biodiversity conservation.  
• An Asset Protection Zone (APZ) on slopes greater than 1 in 5, and along ridgelines is unacceptable due to the environmental consequences of clearing such slopes and ridgelines.  
• Clearing for the purpose of bushfire risk management must be consistent with the Upper Hunter Emergency Risk Management Plan – Natural Hazards and of the current version of Planning for Bush Fire Protection.  
• Fire resistant plant species and landscaping should be provided for development on Bush Fire Prone Land, In accordance with the requirements of the current version of Planning for Bush Fire Protection. |

Upper Hunter Development Control Plan 2015
10b.7 Supplementary guidance

The following documents or reference materials provide further advice or information that is relevant to this section.

Upper Hunter Shire Bushfire Prone Land Map

Explanatory outline

Section 10c outlines assessment criteria relating to the management of geotechnical hazards. The following matters are covered:

- requirements for preparation of geotechnical reports
- development on steep slopes, and potential areas of land slip
- areas subject to fill
- land affected by salinity
- construction works

10c Geotechnical hazards

10c.1 Application of this section

This section applies to development described in Column 1 when carried out on land described in Column 2.

<table>
<thead>
<tr>
<th>Column 1: Type of development</th>
<th>Column 2: Applicable land</th>
</tr>
</thead>
<tbody>
<tr>
<td>Any development that requires development consent.</td>
<td>Any land.</td>
</tr>
<tr>
<td>Does not apply to proposals for which a complying development certificate is sought under State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.</td>
<td></td>
</tr>
</tbody>
</table>

10c.2 Relevant planning instruments & legislation

The *Upper Hunter Local Environmental Plan 2013* is relevant to development to which this section applies.

Further planning instruments and legislation may also be relevant. In the event of any inconsistency, the *Upper Hunter Local Environmental Plan 2013* will prevail over requirements or criteria contained in this section.

10c.3 Definitions

There may be some terms used in this section that are defined in the Dictionary.

10c.4 Objectives

The objectives of this section are to:

- avoid development on land subject to geotechnical hazards where possible
- ensure potential geotechnical hazards are appropriately considered in development approvals
- identify requirements for geotechnical studies and reports.
Part 10  Natural hazards

10c  Geotechnical hazard

10c.5  Supporting plans & documentation

Development applications that are subject to this section should be supported by the following plans and documentation.

<table>
<thead>
<tr>
<th>Item</th>
<th>When required</th>
<th>Plans or information to be provided</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.  General requirements</td>
<td>All applications</td>
<td>Refer to section 2c Lodging a development application.</td>
</tr>
<tr>
<td>B.  Geotechnical hazard assessment</td>
<td>Applications that involve:</td>
<td>Geotechnical report, undertaken by a suitably qualified and experienced person, that:</td>
</tr>
<tr>
<td></td>
<td>• land potentially subject to instability, slip, or other mass movement</td>
<td>• considers all relevant matters relating to the development of the land, as outlined in this section, including on and off-site impacts arising from development</td>
</tr>
<tr>
<td></td>
<td>• steep land (slopes generally 1 in 3 or greater)</td>
<td>• includes recommendations to be applied in the approval and construction of the development.</td>
</tr>
<tr>
<td></td>
<td>• significant land surface disturbance</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• large-scale industrial or commercial development.</td>
<td></td>
</tr>
<tr>
<td>C.  Salinity assessment</td>
<td>Applications that involve:</td>
<td>Investigations and sampling for salinity should be conducted in accordance with the requirements of the Office of Environment and Heritage booklet ‘Site Investigations for Urban Salinity’ and should be undertaken by a suitably qualified and experienced person.</td>
</tr>
<tr>
<td></td>
<td>• land subject to soil salinity</td>
<td>In areas of salinity affectation, a Salinity Management Plan is to be prepared to guide earthworks and construction of the subdivision. The Salinity Management Plan is to address the following considerations:</td>
</tr>
<tr>
<td></td>
<td>• land that adjacent to other land known to be subject to soil salinity</td>
<td>• minimising groundwater recharge</td>
</tr>
<tr>
<td></td>
<td>• land within a sub-catchment identified as Very High/High to Moderate salinity risk in the Hydrogeological Landscapes (HGL) mapping by the NSW Department of Primary Industries (Nicholson, et al., 2014).</td>
<td>• excavation and soil disturbance</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• construction standards for roads, infrastructure and buildings</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• provision of stormwater management facilities and subsurface drainage</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• location and scale of landscaping and vegetation planting (based on appropriate modelling) and suitable local plant species (local provenance seed stock).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• a Salinity Monitoring Plan to monitor both on-site and off-site impacts.</td>
</tr>
</tbody>
</table>

10c.6  Assessment criteria

A performance-based approach will be adopted in the assessment of development applications. Applications will be assessed according to the extent to which the outcomes specified in the left-hand column of the following table will be satisfied or achieved by the design, construction or operation of the proposal.

The design guidelines specified in the right-hand column indicate design and best practice solutions by which the required outcomes can be met. They do not preclude other solutions that may be suitable under particular local circumstances. All proposals will be considered on merit.
Outcomes to be achieved  | Design guidelines
--- | ---
### A. Land slip & unstable land
- Subdivision and development of land subject to land slip or that is otherwise unstable is avoided
  - Applicants must demonstrate that more suitable alternative development sites are not feasible.
  - Measures recommended in a geotechnical report to reduce or minimise hazard are to be implemented
### B. Steep slopes
- Subdivision and development of land on steep slopes is avoided.
  - The slope of land proposed to be developed is to be surveyed and determined by a registered surveyor.
  - Measures recommended in a geotechnical report to reduce or minimise hazard are to be implemented
- Hazards associated with the development of steep slopes is adequately assessed, and measures are taken to reduce or minimise hazards to an acceptable level.
### C. Soil salinity
- Development on saline soils is avoided
  - Identify hazard areas and processes on the site.
  - Reduce water input and maintain natural water balance that limits groundwater rise and through flow.
  - Maintain good drainage and reduce waterlogging.
  - Retain or increase vegetation in strategic areas.
  - Implement appropriate building controls and engineering responses - concrete foundations, brickwork/masonry products, roads, above ground/underground infrastructure must be constructed to a standard that appropriately responds to the level of saline conditions affecting the land.
- Where a development site is subject to salinity, measures are taken to protect buildings and infrastructure from corrosion associated with saline soils.
- Development does not significantly increase the salt load in existing watercourses and soils within the catchment.
### D. Construction works
- Works including deep earthworks, and construction on filled land require a geotechnical assessment to identify whether the subject site is suitable for its intended use as part of the development application.

### 10c.7 Supplementary guidance
The following documents or reference materials provide further advice or information that is relevant to this section.
